

NON-SPARKING SUGAR SCOOP

The EGA Master non-sparking sugar scoop is a specialized tool designed for use in industrial environments with a high risk of explosion due to the presence of sugar dust or flammable atmospheres.

It is ideal for industries such as food and chemical processing, as well as any industrial facility where there is a significant risk of dust explosion.

Easy to use!

1. For collecting, transporting, and handling sugar or other granular materials in industrial environments where the generation of sparks could be hazardous.

2. Manufactured from copper-beryllium material, which does not generate sparks when in contact with hard surfaces or under friction.

3. Corrosion-resistant to ensure a prolonged lifespan and safe operation.

4. Minimizes the risk of ignition of combustible dust in the workplace environment.

5. Ergonomic design that facilitates manual use, while being robust enough to handle the sugar load efficiently.
